

VISWALINI S

Data Analyst

viswalini22@gmail.com | 7338703142 | Madurai, Tamil Nadu | GitHub: github.com/viswakimi

SUMMARY

Aspiring Data Analyst with hands-on experience in Python, SQL, Excel, Power BI, and Business Intelligence. Skilled in data cleaning, data preprocessing, EDA and dashboard development. Experienced in transforming complex datasets into actionable insights through data visualization, reporting, and machine learning techniques. Passionate about leveraging data driven solutions to support business decision-making and improve operational performance.

SKILLS

Python | SQL | Oracle SQL | Excel | Power BI | Pandas | NumPy | Scikit-learn | Matplotlib | Seaborn | Plotly | Data Analysis | Data Cleaning | Data Preprocessing | ETL | EDA | Feature Engineering | Data Visualization | Dashboard Development | Business Intelligence | Machine Learning | AWS (EC2, S3, RDS) | Oracle Fusion Cloud | HCM Extract | BI Publisher | OTBI | FBDI | HDL | OIC | REST API | SOAP Web Services | Postman |

PROJECTS

Deployment of News Article Categorization Application Using AWS Services

Key Skills: Python, Machine Learning, NLP, Hugging Face Transformers, Streamlit, AWS EC2, S3, RDS, MySQL

- Developed an **NLP-based web application** using **Python** and **Hugging Face Transformers** to automatically classify news articles into predefined categories.
- Fine-tuned a TinyBERT model, achieving **88.4% accuracy** and 0.881 Macro F1-Score through text preprocessing, tokenization, and feature engineering.
- Built an interactive **Streamlit application** enabling real-time article classification and prediction.
- Designed and deployed a scalable **AWS** architecture using EC2, S3, and RDS, enabling secure application hosting, model storage, and efficient database management.

Stock Market Analytics Dashboard & Business Intelligence Platform

Key Skills: Python, SQL, MySQL, Excel, Pandas, Power BI, Streamlit, Data Analytics, Data Visualization

- Developed a stock market analytics platform using **Python**, **SQL**, and **MySQL** to analyze 50 Nifty stocks and generate actionable business insights.
- Built an automated **ETL pipeline** to transform raw YAML datasets into structured databases, improving data organization and accessibility.
- Performed **Exploratory Data Analysis (EDA)**, **statistical analysis**, and calculation of key financial metrics including returns, volatility, and market trends.
- Created interactive **Power BI** and **Streamlit** dashboards to visualize stock performance, sector trends, correlation analysis, and KPI metrics, enabling faster data-driven decision-making.

RedBus Data Scraping & Analytics Dashboard

Key Skills: Python, Selenium, MySQL, Streamlit, Pandas, Data Cleaning, ETL, Data Visualization

- Automated the extraction of **10,000+ bus travel** records, including routes, operators, departure timings, ticket prices, seat availability, and ratings, using Selenium web scraping.
- Designed an ETL pipeline to clean, transform, and load 10,000+ records into MySQL, improving data quality, accessibility, and reporting efficiency.
- Performed exploratory data analysis (EDA) to identify pricing trends, popular routes, peak booking periods, and operator performance, generating actionable business insights.
- Developed an interactive Streamlit dashboard with dynamic filters and visualizations, enabling real-time analysis and supporting route optimization, pricing strategy, and customer decision-making.
